AIDS & SIV-INFECTION OF HAMSTERS

W. J. McFadden, J. R. Stanley, A. C. F. Cameron

Page 127

Infection of hamsters with the simian immunodeficiency virus (SIV) or the human immunodeficiency virus (HIV) can lead to disease and death. Host factors and viral factors both play important roles in determining the outcome of infection. In this review, we discuss the immune response of hamsters to SIV and HIV, and the potential for using hamsters as a model system for studying the pathogenesis of these viruses.

Key points:
- Hamsters infected with SIV or HIV can develop disease and eventually die.
- The immune response to these viruses is crucial in determining the outcome of infection.
- Host and viral factors contribute to the disease progression.

Future directions:
- Further characterization of the immune response in hamsters infected with SIV or HIV.
- Exploration of the use of hamsters as a model system for studying the pathogenesis of HIV.

The government’s policy today is underpinned by the principles of equality, justice, and freedom. These values guide the government’s actions and decisions, ensuring that all citizens are treated fairly and with dignity. The government is committed to upholding the rule of law and ensuring that everyone has access to justice.

In pursuing these goals, the government works closely with civil society organizations, the private sector, and international partners to address pressing social and economic issues. Through collaborative efforts, the government aims to create a more just and equitable society where everyone has the opportunity to succeed and thrive.

The government’s commitment to these principles is reflected in its initiatives and programs, which focus on improving access to education, healthcare, and other essential services. The government recognizes that these fundamental rights are the cornerstone of a prosperous and democratic society.

Together, we can build a brighter future for all. Let us work towards a society where every individual is valued and empowered to contribute to the common good.

The growth of Chinese and Japanese imports has been substantial, but the increase in the Chinese market is particularly significant. This growth is fueled by the rapid development of China's economy and the rising middle class. The rapid growth of the Chinese economy has led to a significant increase in demand for consumer goods, particularly high-tech products. This has created a strong demand for Chinese and Japanese imports, which have been able to capitalize on this demand. The growth of the Chinese market has also been facilitated by the country's large population, which provides a large pool of potential customers. This has helped Chinese and Japanese companies to expand their market share in China. In addition, the Chinese government has been actively promoting foreign investment, which has further helped to boost the growth of imports from China and Japan.
