Data Movement Instructions
move Rdest, Rsrc Move y

The multiply and divide unit produces its result in two additional registers, hi and lo. These instructions move values to and from these registers. The multiply, divide, and remainder instructions described above are pseudoinstructions that make it appear as if this unit operates
on the general registers and detect error conditions such as divide by zero or overflow.

.align n
Align the next datum on a 2 n byte boundary. For example, .align 2 aligns the next value on a word boundary. .align 0 turns off

automatic alignment of .half, .word, .float, and .double directives until the next .data or .kdata directive.

.ascii str
Store the string in memory, but do not null-terminate it.

.asciiz str
Store the string in memory and null-terminate it.

.byte b1, ..., bn
Store the n values in successive bytes of memory.

.data <addr>
The following data items should be stored in the data segment. If the optional argument addr is present, the items are stored beginning at address addr .

.double d1, ..., dn
Store the n floating point double precision numbers in successive memory locations.

.extern sym size
Declare that the datum stored at sym is size bytes large and is a global symbol. This directive enables the assembler to store the datum in a portion of the data segment that is efficiently accessed via register $gp.

.float f1, ..., fn
Store the n floating point single precision numbers in successive memory locations.

.globl sym
Declare that symbol sym is global and can be referenced from other files.

.half h1, ..., hn
Store the n 16-bit quantities in successive memory halfwords.

.space n
Allocate n bytes of space in the current segment (which must be the data segment in SPIM).

.text <addr>
The next items are put in the user text segment. In SPIM, these items may only be instructions or words (see the .word directive below). If the optional argument addr is present, the items are stored beginning at address addr .

.word w1, ..., wn
Store the n 32-bit quantities in successive memory words.
